Professional Summary

AI/ML undergraduate building intelligent systems at the intersection of machine learning, generative AI, and software engineering. Focused on developing scalable, real-world AI solutions, with recognition at national-level hackathons and hands-on industry experience.

Education

B.Tech in Artificial Intelligence and Machine Learning 2023 – 2027
Dhanekula Institute of Engineering and Technology, Vijayawada CGPA: 9.4/10

Technical Skills

Languages: Python, Java, C, SQL
Software Development: React.js, FastAPI, Django, REST APIs, HTML, CSS, JavaScript
AI/ML: Machine Learning, Deep Learning, Natural Language Processing, Computer Vision, Generative AI, LLMs, RAG
Databases & Tools: PostgreSQL, Neo4j, ChromaDB, Git, GitHub
Core CS: Data Structures and Algorithms, DBMS, Operating Systems, Computer Networks

Experience

Google AI-ML Intern – EduSkills Foundation (AICTE) Jun 2026 – Aug 2026
Built and evaluated TensorFlow models across object detection, custom image classification, and product-image search, applying neural network fundamentals to real-world vision tasks.

Quantum Portfolio Optimization Intern – QuEdX Dec 2025 – Feb 2026
Implemented portfolio optimization algorithms, simulations, result analysis, code maintenance, and experiment documentation.

CodeAlpha – Full Stack Developer Intern Jul 2025 – Aug 2025
Developed full-stack application components involving frontend workflows, backend services, REST APIs, and application integration.

Projects

Project Foresight – AQVH 2025 – National Hackathon Winner GitHub
– Built a hybrid GNN + quantum-ML fraud detection system (Qiskit QSVC/VQE) that caught “mule” fraud rings invisible to a classical XGBoost baseline.
– Achieved **94% detection vs. 0%** on the baseline (91.8% validation accuracy).
– **Tech Stack:** Qiskit, PyTorch Geometric, FastAPI, React

OrbitBot – AI Knowledge Assistant – ISRO Hackathon Live Demo | GitHub
– Built and deployed a hybrid RAG assistant for ISRO’s MOSDAC portal, combining Neo4j + ChromaDB retrieval over **3,000+** scraped documents.
– **Tech Stack:** React.js, FastAPI, Neo4j, LangChain, ChromaDB

WishMart – Full-Stack E-Commerce Platform Live Demo | GitHub
– Built a full-stack Django e-commerce platform with auth, catalogue, cart, and Stripe payments; deployed to production with PostgreSQL.
– **Tech Stack:** Django, JavaScript, PostgreSQL, Bootstrap, Stripe

NexusQA – Autonomous Quality Intelligence Engine GitHub
– Built a tri-agent QA platform that autonomously maps web apps into a Neo4j knowledge graph, detects defects via gray-box analysis, and auto-generates Playwright scripts to reproduce them.
– **Tech Stack:** Python, FastAPI, React, Neo4j, Playwright

StudyChain – AI Academic Digest Platform Live Demo | GitHub
– Built an AI-powered platform using Groq LLMs to generate lecture digests, with JWT-authenticated student workflows on FastAPI/SQLAlchemy.
– **Tech Stack:** FastAPI, React, Groq LLM, SQLAlchemy, JWT

Certifications and Technical Achievements

Winner – Amaravati Quantum Valley Hackathon 2025 (National Level)

- Artificial Intelligence Fundamentals – IBM
- Prepare to Develop AI Solutions on Azure – Microsoft
- Data Analytics – Google Cloud Career Launchpad

- Introduction to Large Language Models – Google cloud
- Tata – GenAI Powered Data Analytics Job Simulation
- Fundamentals of Generative AI – Microsoft
